

MongoDB Atlas

Cluster Create & MongoDB Compass Connection Guide

1	MongoDB Atlas website par jao MongoDB Atlas ki official website par jaao, account banao ya login karo, aur Free Tier (M0) wala cluster option select karo.
2	Cluster ka naam do Configuration section ke neeche apne cluster ka ek naam do (jaise <i>complete-backend-learn</i>) jisse aage pehchan sako.
3	Deploy karo Create Deployment button par click karo — cluster create hona shuru ho jayega. Isme kuch minute lag sakte hain.
4	Clusters section Cluster ban jaane ke baad wo Clusters section ke andar dikhega.
5	Databases ka structure Cluster ke andar hi Databases hote hain — yahin par tum apne collections aur data manage karoge.
6	Side Panel options Left side panel me mainly do important sections hote hain: Network Access aur Database Access .
7	Network Access Yahan par allowed IP Address add kiya jaata hai, taaki tumhara computer/application cluster se connect ho sake.
8	Database Access – CRUD Operations Database Access ke andar hi database users manage hote hain. In users ke zariye mainly 4 CRUD operations perform kiye jaate hain: Create, Read, Update, Delete .
9	Naya Database User add karna Jab naya database user add karte ho, us waqt jo username aur password create karte ho, use dhyan se yaad rakho ya kahin note kar lo — baad me connection string me yehi use hota hai.
10	Built-in Role select karo Built-in Roles me Atlas Admin role select karo, kyunki isse user database par kuch bhi (sab operations) perform kar sakta hai.

11	MongoDB Compass application kholo Ab apne computer par MongoDB Compass application open karo.
12	Cluster ke page par jaao Atlas website par wapas jaake apne bnaye hue cluster ke page par jaao.
13	Connect option par click karo Cluster page par Connect button par click karo.
14	"I have MongoDB Compass installed" select karo Options me se I have MongoDB Compass installed wala option choose karo.
15	Connection string copy karo Yahan se apna connection string (URI link) copy kar lo.
16	Username aur Password daalo, phir Compass me paste karo Us connection string me apna username aur password daalo (placeholder ki jagah). Fir MongoDB Compass application kholo, upar + icon par click karo, aur jo URI box aayega usme ye poora connection string paste kar do.
17	Save & Connect Ant me Save & Connect button par click karo. Connection establish ho jayega aur tumhara database Compass se successfully connect ho jayega.

Zaroori Tip: Database user banate waqt jo username/password set karo, use kahin surakshit jagah note kar lo. Connection string me <db_username> aur <db_password> placeholders ki jagah wahi asli username/password daalna hota hai, na ki cluster ka naam.
